

# Ruark Audio & Hospitality

About us

## Introduction

Ruark have been creating audio products for a little over thirty years, and we're just as passionate today as we were back then. Our timeless and elegant design principles remain the same as ever, and as technology has developed over the years, our products have too. We are immensely proud to offer a new generation of music systems with wide ranging appeal, enjoyed for both their beautiful design and superior sound.

## Our Team

Based on the south east coast of England, we are a family-owned company with an amazing, passionate team. Our inspiration is varied and comes from our experiences, things we admire, our love of music, and walks along the beach in Southend.

## Who we are

We make products for people who love music and understand that everything sounds better through a great music system.

## Who we are

The use of carefully selected materials and high-quality components give our products their unique character. We blend design and engineering to create products that look and sound superb.

What we do

We design and engineer all our  
music systems entirely in-house

## What we do

Our current range includes radios, music systems, speaker systems and a radiogram, all with class leading technology built in.

## What we do

We sell our products through specialist hi-fi shops, design shops, major retailers (John Lewis, Selfridges, Harrods) and international distribution partners.

Why choose us?

## An enhanced experience

We understand the importance of detail in creating a memorable experience, but in considering everything from soft furnishings and bathroom fittings to colour palettes and lighting, many hotel operators still overlook one vital sensory element: sound.

The smartphone means that many guests will have their music collection with them when they travel. Enabling them to enjoy their favourite radio stations and music with sound quality as good as (or better than) they hear at home is a simple but powerful way to enhance their time with you.

“We chose Ruark Audio because not only do their products sound great but their pleasing aesthetics compliment the interior design of our rooms, something other products simply didn’t do.”

Andrew Stembridge  
Managing Director, Chewton Glen

“When we searched for a high quality radio for our guest bedrooms, we had specific criteria to fulfil. It had to be very high quality, simple for our guests to use and above all, a British brand. There was one clear winner. Ruark Audio delivered in all areas and continues to impress with its latest models.”

Tim Clough

Director of IT, The Savoy, London

## Ruark R1: Perfect for hospitality

Loved since its introduction in 2006, the R1 is our most popular model among our hospitality customers. With a sensitive DAB and FM receiver we know that many choose to have the radio playing quietly for when guests enter their accommodation, which immediately creates a relaxing ambience.

## Ruark R1: Perfect for hospitality

And, with its Bluetooth connectivity, guests can easily connect and enjoy streaming their own content from their smartphones or suchlike devices. Smartphones can also be charged from the USB-C port on the rear. The auto-dimming display makes R1 ideal for use next to a bed and with its sleep timer activated and its relaxing natural sound, the R1 will lull many guests to a perfect night's sleep.

In addition for R1 we've developed software specifically for hotel use which we can customise and install to our client's requirements prior to dispatch. This allows us to customise the volume output level, limit the built-in alarm to 'once-only' and even show your hotel's name on the display screen when it's in standby mode.

## Designed with hospitality in mind

While the R1 is perfect for most settings, you may require something with a little more presence and power for larger guest rooms and suites and for this our R2 or R3 are both perfect.

These popular music systems offer class-leading audio with enhanced stereo sound. They're equipped with the latest-generation Bluetooth 5 receiver, and a powerful SmartRadio tuner with internet radio, DAB, DAB+ and FM channels, which will allow guests to access their favourite radio stations from all around the globe.
